Experience

SEM Trans

Edmond, OK

Software Engineer

Jan 2023 – Present

- **Built** a custom VueJS web application and FastAPI/Python backend to manage drivers, equipment assets, and compliance documents, implementing CRUD interfaces, role-based access control, and JSON schema validation for data integrity.
- **Architected and deployed** a Dockerized invoice-automation pipeline on Google Cloud using LaTeX and Python to generate, validate, and deliver invoices via RESTful APIs, eliminating manual errors and reducing turnaround by 80%.
- **Optimized** high-throughput workflows by designing normalized PostgreSQL schemas and writing performance-tuned SQL queries, laying a robust foundation for rapid feature expansion.

XPEL One

Sacramento, CA

Software Engineer

Nov 2021 – Feb 2023

- **Architected** microservice APIs NestJS/ExpressJS, containerized with Docker and managed via Docker Compose, scaling to support twice the user load while maintaining 99.9% uptime.
- **Implemented** CI/CD pipelines leveraging Vitest/JestJS and Supertest to drive unit, integration, and end-to-end testing, catching regressions early, accelerating release cadence by 40%, and reducing post-release defects by 60%.
- **Partnered** with product owners, QA engineers, and DevOps, communicating in English, Russian, and Ukrainian, to scope, plan, and ship five+ major features on schedule and within budget, maintaining a 95% on-time delivery rate.

IncoFort

Sacramento, CA

Software Engineer

Mar 2019 – Nov 2021

- **Mentored** engineers through pair programming and code reviews in Python and JavaScript, documenting architectural best practices to expedite onboarding and elevate team productivity.
- **Automated** data-ingestion and administrative tasks with Python and Bash scripts (using BeautifulSoup and OpenPyXL), cutting manual workload by 70% and improving processing speed.
- **Authored** process and flow diagrams in Miro and architecture documentation in Markdown, clarifying system interactions (Django, Redis, MySQL) for cross-functional teams and reducing onboarding QA by 50%.

American River College

Sacramento, CA

Embedded Systems Engineer Intern

Jan 2019 – May 2019

- **Troubleshooted** embedded-firmware issues in C/C++ using Logisim and root-cause analysis, improving system stability and accelerating development cycles.
- **Collaborated** in Agile sprints using Jira, contributing design-review feedback that streamlined resource allocation and sprint planning.
- **Enforced** coding standards via code reviews in Git, boosting firmware maintainability and cutting defect rates in downstream testing by 30%.

Education

The University of Oklahoma – Norman

Norman, OK

M.Sc. in Computer Science, GPA: 3.67/4.0

Expected Dec 2026

California State University – Sacramento

Sacramento, CA

B.Sc. in Computer Science, GPA: 3.68/4.0

Aug 2021 – May 2025

American River College

Sacramento, CA

A.Sc. in Electrical Engineering and Physical Science, GPA: 3.67/4.0

Jan 2018 – Aug 2021

Projects

University Senior Project – Team Lead

Client Lookup Tool

California State University – Sacramento

Fall 2024 – Spring 2025

Course Group Project – Agile Development, Team Lead

Invoicing System

California State University – Sacramento
